
Stack.PY Documentation

Release 0.2.0

Nathan Osman

August 04, 2013

CONTENTS

Stack.PY provides a simple and intuitive set of classes for accessing the [Stack Exchange API](#).

Contents:

FEATURES

Stack.PY aims to provide the following set of features:

- complete implementation of version 2.1 of the Stack Exchange API
- partial support for version 2.2 of the API, which includes the ability to post questions and answers
- support for caching API responses using a number of different backends (Redis, MySQL, etc.)
- automatic rate limiting according to the published specification
- transparent support for pagination

ORGANIZATION

All API routes are divided into two distinct categories:

- global routes and
- site specific routes

The global routes are typically used to perform authentication or enumerate sites and are accessed using a method of the API class. In order to use the site specific routes, you will need to create an instance of the Site class.

INDICES AND TABLES

- *genindex*
- *modindex*
- *search*
